MOTOTRBO™ Devices Warranty and Service Offers

Supporting you to minimize disruption
and improve continuity

MOTOROLA SOLUTIONS

Reliable and long lasting

MOTOTRBO is designed and built for long-lasting performance, but it is not always possible to prevent every equipment failure.

Components can fail and software can become outdated over time leading to users out of communication with the rest of the team. Ensuring you have a plan in place to get communications flowing again is critical to a smooth running business.

MOTOTRBO includes a manufacturer's warranty as standard that provides eligibility to software updates, technical support and hardware repair. To maintain your MOTOTRBO radio so that it continues to operate at optimal levels, optional service packages are also available to provide extended and enhanced levels of protection including cover for accidental damage and wear and tear.

Service features

Hardware repair (manufacturing defects)

Manufacturing defect repair provides cover to repair any failed MOTOTRBO radios caused by a manufacturing issue. Repairs are carried out to the highest quality standards by trained technicians at our central repair facility.

Hardware repair including wear and tear

Extended cover allows repair of both manufacturing defects and normal wear and tear.

Hardware repair including accidental damage

Our ultimate hardware cover allows repair of manufacturing defects, normal wear and tear and accidental damage, giving you complete peace of mind when it comes to protecting your radio fleet.

Software updates

At Motorola Solutions, we are constantly innovating and adding new features through our certified and tested software releases. Take advantage of these updates and enhancements, plus the latest cybersecurity updates, with access to the newest versions of software for your radio.

Remote technical support

Our experienced technologists are available to help isolate and resolve issues you may have with your MOTOTRBO radios. With an extensive knowledge base, trained and certified technical engineers and leading standards for escalation procedures, this team can help troubleshoot and find resolutions for a wide range of technical issues.

Device maintenance

MOTOTRBO radios can optionally be programmed to alert the user to upcoming maintenance events, helping you proactively maintain your radio fleet in optimal condition. The preventive maintenance alert (part number HKVN4941) notifies users to schedule a regular service check, SMA alert lets the user know when the end of warranty or service agreement is approaching and battery alert warns when the radio's battery is approaching the end of its serviceable life.

Standard warranty provision

Protection against the most common issues.

Optional service offers

Enhanced coverage for additional peace of mind.

Benefits of software updates

New system releases are regularly issued for MOTOTRBO and include updated software for devices, infrastructure and system programming and management tools.

Protect your radio investment with the latest software and extend the usable lifetime of your MOTOTRBO infrastructure and devices with increased capability, security and reliability.

Benefit from feature and performance enhancements

Improve system availability and stability

Ensure compatibility for integration with other devices and systems

Add new features and functionality

Protect your system with the latest cybersecurity updates
